Fourth Semester B.E. Degree Examination, Dec.2016/Jan.2017
Field Theory

Time: 3 hrs.

Max. Marks:100

**Note: Answer any FIVE full questions, selecting
atleast TWO questions from each part.**

PART – A

- 1 a. State and explain Coulomb's law in vector form. (05 Marks)
 b. Two point charges $Q_1 = -0.3\text{nC}$ at $[25, -30, -15]$, and $Q_2 = 0.5\text{nC}$ at $[-10, 8, 12]$ present in free space determine \vec{E} at $P(15, 20, 50)$. (05 Marks)
- c. Given $D = 4y^2\hat{a}_x + 3x^2y\hat{a}_y + 15\hat{a}_z \text{ C/m}^2$ verify both sides of Divergence theorem and evaluate charge enclosed within region $0 < x, y, z < 2$. (10 Marks)
- 2 a. Find out the work done in moving a charge $\rho = a$ to $\rho = b$ along with radial direction due to infinite line charge. (06 Marks)
 b. Given a potential $V = 3x^2 + 4y^2 \text{ (V)}$, find the energy stored in volume described by $0 \leq x \leq 1\text{m}$, $0 \leq y \leq 1\text{m}$ and $0 \leq z \leq 1\text{m}$. (06 Marks)
 c. Obtain the boundary condition between conductor and free space. (08 Marks)
- 3 a. State and prove uniqueness theorem. (08 Marks)
 b. In spherical co-ordinates $V = 0$ at $r = 0.1 \text{ m}$ and $V = 100 \text{ V}$ at $r = 2\text{m}$. Assuming free space between the concentric spherical shell find \vec{E} and \vec{D} . (06 Marks)
 c. Use Laplace equation to find the capacitance between two plate of a parallel plate capacitor, separated by distance 'd' and maintained at potential "o" and "V₀" respectively. (06 Marks)
- 4 a. Find the magnetic field intensity and flux density at the centre, of a circular wire carrying a current 'I' and of radius 'a' by using Biot – Savart's law. (06 Marks)
 b. In cylindrical co-ordinates a magnetic field is given as $\vec{H} = [4\rho - 2\rho^2]\hat{a}_\phi \text{ A/m}$ $0 \leq \rho \leq 1$
 i) Find the current density as a function of ρ within the cylinder
 ii) Find the total current that passes through the surface $z = 0$ and $0 \leq \rho \leq 1\text{m}$ in \hat{a}_z direction. (06 Marks)
- c. Define vector magnetic potential and prove that $A = \frac{\mu_0}{4\pi} \int \frac{j}{r} \cdot dv$. (08 Marks)

PART – B

- 5 a. Derive an expression for the force between two differential current elements. (06 Marks)
 b. The $z = 0$ marks the boundary between two magnetic materials. For region 1, ($z > 0$), $\mu_1 = 4 \mu\text{H}$ and region 2, ($z < 0$), $\mu_2 = 6 \mu\text{H}$. The surface current density at the boundary is given as $\vec{K} = 12\hat{a}_y \text{ A/m}$, find \vec{H}_2 if $\vec{H}_1 = 40\hat{a}_x + 50\hat{a}_y + 12\hat{a}_z \text{ kA/m}$. (06 Marks)
 c. Calculate the inductance of a solenoid of 200 turns wound tightly on a cylindrical type of length 60 cm and of diameter 6 cm. Given that the medium is air. Derive the expression used. (08 Marks)

- 6 a. List Maxwell's equations for time varying field in point and integral form. (06 Marks)
 b. Starting from Ampere's circuital law derive an expression for displacement current density for time varying fields. (06 Marks)
 c. What is retarded potential? Obtain an expression for retarded potential V and A. (08 Marks)
- 7 a. State and prove Poynting's theorem. (10 Marks)
 b. With respect to wave propagation in good conductors, describe what is skin effect, derive an expression for the depth of penetration. If $\sigma = 58 \times 10^6 \text{ } \Omega/\text{m}$ at frequency 10 MHz determine depth of penetration. (10 Marks)
- 8 a. The plane $x = 0$ is the boundary between two perfect dielectric. For $x < 0$, $\mu_1 = \mu_0$, $\epsilon_1 = 3.6\pi \text{ pf/m}$ and $\sigma_1 = 0$; for $x > 0$, $\mu_2 = \mu_0$, $\epsilon_2 = 14.4\pi \text{ pf/m}$ and $\sigma_2 = 0$.
 If $E_i^+ = 60 \cos(10^9 t - \beta_1 x) \text{ V/m}$ find :
 i) Incident magnetic field H_i
 ii) Reflected electric and magnetic field E_r and H_r
 iii) Transmitted electric and magnetic field E_t and H_t (10 Marks)
 b. What is a standing wave? Derive an expression for standing wave ratio. (10 Marks)
