CRASH COURSE

USN				10CS5
-----	--	--	--	-------

Fifth Semester B.E. Degree Examination, May 2017 Computer Networks - I

atleast TWO questions from each part. PART - A 1 a. What is data communication? What are its important fundamental characteristics? Lexplain the five components of a data communication system, with examples. (12 b. List out the layers in OSI reference model and explain any two layers in detail. (08 lexplain about the causes of transmission impairment. (08 lexplain about the causes of transmission impairment. (08 lexplain about the causes of transmission impairment. (06 lexplain about the causes of transmission impairment. (06 lexplain the three parameters of the sine wave with waveform and write the useach. (06 lexplain the three parameters of the sine wave with waveform and write the useach. (06 lexplain the signal element? How many signal elements do we need? (06 lements are carried by each signal element? How many signal elements do we need? (06 lexplain the spread spectrum? Explain the following techniques for spread spectrum: FI DSSS. (14 lexplain) b. Briefly discuss about delay in virtual circuit networks. (06 lexplain the receiver for detection. (08 lexplain) b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12 lexplain the frame formats and control fields for different types of HDLC frames. (14 lexplain the frame formats and control fields for different types of HDLC frames. (14 lexplain 802.3 frame format and addressing. (08 lexplain about repeated to the connecting devices used in data communication. Explain about repeated to the connecting devices used in data communication.	1 11	me:		larks: 100				
1 a. What is data communication? What are its important fundamental characteristics? L explain the five components of a data communication system, with examples. (12 b. List out the layers in OSI reference model and explain any two layers in detail. (08 c. List out the layers in OSI reference model and explain any two layers in detail. (08 b. Briefly explain the three parameters of the sine wave with waveform and write the useach. (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do we need? (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do we need? (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do we need? (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do we need? (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do we need? (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do we need? (06 c. An analog signal has better in the unit of the bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do we need? (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do control fields of 5000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many elements are carried by each signal bandwidth of 2000 baud. How many elements are carried by each signal element? How many elements are			Note: Answer any FIVE full questions, selecting atleast TWO questions from each part.					
explain the five components of a data communication system, with examples. (12 b. List out the layers in OSI reference model and explain any two layers in detail. (08 2 a. Explain about the causes of transmission impairment. (08 b. Briefly explain the three parameters of the sine wave with waveform and write the uncach. (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How man elements are carried by each signal element? How many signal elements do we need? (06 3 a. What is spread spectrum? Explain the following techniques for spread spectrum: FI DSSS. (14 b. Briefly discuss about delay in virtual circuit networks. (06 4 a. What is internet checksum? List the steps undertaken by the sender and the receiver for detection. (08 b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12 PART - B 5 a. Differentiate between character oriented and bit oriented format for framing. (06 b. Explain the frame formats and control fields for different types of HDLC frames. (14 c) Explain 802.3 frame format and addressing. (08 c) Table Describe Bluetooth architecture. (10 c) Describe Bluetooth architecture. (10 c) List out the connecting devices used in data communication. Explain about repeated.			$\underline{PART - A}$					
b. List out the layers in OSI reference model and explain any two layers in detail. (08 2 a. Explain about the causes of transmission impairment. (08 b. Briefly explain the three parameters of the sine wave with waveform and write the uneach. (06 c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How man elements are carried by each signal element? How many signal elements do we need? (06 3 a. What is spread spectrum? Explain the following techniques for spread spectrum: Ff. DSSS. (14 b. Briefly discuss about delay in virtual circuit networks. (06 4 a. What is internet checksum? List the steps undertaken by the sender and the receiver for detection. (08 b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12 PART - B 5 a. Differentiate between character oriented and bit oriented format for framing. (06 b. Explain the frame formats and control fields for different types of HDLC frames. (14 6 a. List out the different channelization protocols. Explain CDMA. (12 b. Explain 802.3 frame format and addressing. (08 7 a. Describe Bluetooth architecture. (10 b. List out the connecting devices used in data communication. Explain about repeated	1	a.	What is data communication? What are its important fundamental characteristics? List and					
b. Briefly explain the three parameters of the sine wave with waveform and write the unit each. (06) c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How many elements are carried by each signal element? How many signal elements do we need? (06) 3 a. What is spread spectrum? Explain the following techniques for spread spectrum: FI DSSS. b. Briefly discuss about delay in virtual circuit networks. (06) 4 a. What is internet checksum? List the steps undertaken by the sender and the receiver for detection. b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12) PART - B 5 a. Differentiate between character oriented and bit oriented format for framing. (14) b. Explain the frame formats and control fields for different types of HDLC frames. (14) 6 a. List out the different channelization protocols. Explain CDMA. (12) b. Explain 802.3 frame format and addressing. (13) 7 a. Describe Bluetooth architecture. (14) List out the connecting devices used in data communication. Explain about repeated.		b.		(12 Marks) (08 Marks)				
c. An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How man elements are carried by each signal element? How many signal elements do we need? (06 3 a. What is spread spectrum? Explain the following techniques for spread spectrum: Ft DSSS. (14 b. Briefly discuss about delay in virtual circuit networks. (06 4 a. What is internet checksum? List the steps undertaken by the sender and the receiver for detection. (08 b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12 PART - B 5 a. Differentiate between character oriented and bit oriented format for framing. (06 b. Explain the frame formats and control fields for different types of HDLC frames. (14 6 a. List out the different channelization protocols. Explain CDMA. (12 b. Explain 802.3 frame format and addressing. (10 c) (10 c) (10 c) (10 c) (11 c) (12 c) (13 c) (14 c) (15 c) (15 c) (16 c) (17 c) (18 c) (19 c) (19 c) (10 c) (10	2		Briefly explain the three parameters of the sine wave with waveform and write the	(08 Marks) he units for (06 Marks)				
DSSS. (14 b. Briefly discuss about delay in virtual circuit networks. (06 4 a. What is internet checksum? List the steps undertaken by the sender and the receiver for detection. (08 b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12 PART - B 5 a. Differentiate between character oriented and bit oriented format for framing. (06 b. Explain the frame formats and control fields for different types of HDLC frames. (14 6 a. List out the different channelization protocols. Explain CDMA. (12 b. Explain 802.3 frame format and addressing. (08 7 a. Describe Bluetooth architecture. (10 b. List out the connecting devices used in data communication. Explain about repeated		c.	An analog signal has a bit rate of 10000 bps and bandwidth of 2000 baud. How elements are carried by each signal element? How many signal elements do we not	many data				
b. Briefly discuss about delay in virtual circuit networks. (06 4 a. What is internet checksum? List the steps undertaken by the sender and the receiver for detection. (08 b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12 PART - B 5 a. Differentiate between character oriented and bit oriented format for framing. (06 b. Explain the frame formats and control fields for different types of HDLC frames. (14 6 a. List out the different channelization protocols. Explain CDMA. (12 b. Explain 802.3 frame format and addressing. (08 7 a. Describe Bluetooth architecture. (10 b. List out the connecting devices used in data communication. Explain about repeated	3	a.		: FHSS ad (14 Marks)				
detection. b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12 PART - B 5 a. Differentiate between character oriented and bit oriented format for framing. b. Explain the frame formats and control fields for different types of HDLC frames. 6 a. List out the different channelization protocols. Explain CDMA. b. Explain 802.3 frame format and addressing. 7 a. Describe Bluetooth architecture. b. List out the connecting devices used in data communication. Explain about repeated.		b.	Briefly discuss about delay in virtual circuit networks.	(06 Marks)				
b. With a neat diagram, explain CRC encoder and decoder C(7, 4). (12 PART – B 5 a. Differentiate between character oriented and bit oriented format for framing. b. Explain the frame formats and control fields for different types of HDLC frames. 6 a. List out the different channelization protocols. Explain CDMA. b. Explain 802.3 frame format and addressing. 7 a. Describe Bluetooth architecture. 6 b. List out the connecting devices used in data communication. Explain about repeated.	4	a.		er for error (08 Marks)				
5 a. Differentiate between character oriented and bit oriented format for framing. 6 b. Explain the frame formats and control fields for different types of HDLC frames. 6 a. List out the different channelization protocols. Explain CDMA. 6 b. Explain 802.3 frame format and addressing. 7 a. Describe Bluetooth architecture. 6 b. List out the connecting devices used in data communication. Explain about repeated.		b.		(12 Marks)				
 b. Explain the frame formats and control fields for different types of HDLC frames. (14 6 a. List out the different channelization protocols. Explain CDMA. (12 b. Explain 802.3 frame format and addressing. (08 7 a. Describe Bluetooth architecture. (10 b. List out the connecting devices used in data communication. Explain about repeated 			PART - B					
 b. Explain 802.3 frame format and addressing. (08 7 a. Describe Bluetooth architecture. b. List out the connecting devices used in data communication. Explain about repeated 	5	_		(06 Marks) (14 Marks)				
b. List out the connecting devices used in data communication. Explain about repeate	6			(12 Marks) (08 Marks)				
	7		List out the connecting devices used in data communication. Explain about rep	(10 Marks) peaters and (10 Marks)				

Explain in detail about classless address. b. Describe the structure of IPv6 address.

Give any two advantages of IPv6 over IPv4. (04 Marks)

(10 Marks)

(06 Marks)
