

Sixth Semester B.E. Degree Examination, June/July 2015
Finite Element Methods

Time: 3 hrs.

Max. Marks: 100

Note: 1. Answer any FIVE full questions, selecting at least TWO questions from each part.
2. Missing data, if any, may be suitably assumed.

PART – A

- 1 a. Write the stress – strain relationship for both plane stress and plane strain problems. (06 Marks)
- b. Discuss the types of elements based on geometry. (06 Marks)
- c. Explain the various application fields of finite element method. (08 Marks)
- 2 a. Derive an expression for total potential energy of an elastic body subjected to body force, traction force and point force. (08 Marks)
- b. Using Raleigh's Ritz method, determine the displacement at mid point and stress in linear one-dimensional rod as shown in Fig. Q2(b). Use second degree polynomial approximation for the displacement. (12 Marks)

- 3 a. Write an interpolation polynomial for linear, quadratic and cubic element. (06 Marks)
- b. Explain simplex, complex and multiplex elements using element shapes. (06 Marks)
- c. Derive the shape functions for a CST element. (08 Marks)
- 4 a. Solve for nodal displacement and elemental stresses for the following Fig.Q4(a), shows a thin plate of uniform thickness of 1 mm, Young's modulus = 200 GPa, weight density of the plate = 76.6×10^{-6} N/mm³. In addition to its weight, it is subjected to a point load of 100 N at its midpoint and model the plate with 2 bar elements. (10 Marks)

- b. Determine the nodal displacements, reactions and stresses for the Fig. Q4(b) using Penalty approach. Take $E = 210$ GPa, Area = 250 mm². (10 Marks)

PART – B

- 5 a. Distinguish between lower and higher order elements. (08 Marks)
- b. Explain the concept of ISO, sub and super parametric elements and their uses. (06 Marks)
- c. Write a note on 2 – point integration rule for 1D and 2D problems. (06 Marks)

- 6 a. Derive an expression for stiffness matrix of a truss element. (08 Marks)
- b. For the pin-jointed configuration shown in Fig.Q6(b), formulate the stiffness matrix. Also determine nodal displacement and stress in each element. (12 Marks)

Fig.Q6(b)

- 7 a. Derive the Hermite shape function for a beam element. (08 Marks)
- b. For the beam and loading shown in Fig. Q7(b), determine the slopes at 2 and 3, vertical deflection at the mid points of the distributed load. Take $E = 200 \text{ GPa}$, $I = 4 \times 10^6 \text{ mm}^4$. (12 Marks)

Fig.Q7(b)

- 8 a. Discuss the derivation of one dimensional heat transfer in thin fin. (08 Marks)
- b. Determine the temperature distribution through the composite wall, subjected to convection heat transfer on the right side surface, with convective heat transfer co-efficient shown in Fig.Q8(b). The ambient temperature is -5°C . Assume unit area. (12 Marks)

Fig.Q8(b)
