Maximize $Z = 5x_1 + 7x_2$ Subject to $-2x_1 + 3x_2 \le 6$; $6x_1 + x_2 \le 30$; 1 of 2

(16 Marks)

 $x_1, x_2 \ge 0$ and integers

10ME74

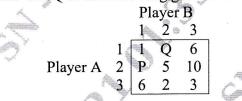

- List any two similarities and two differences between PERT and CPM techniques. (04 Marks) a. A project consists of a series of tasks labeled as A, B, C....H, I with the following b.
 - relationship: (W < XY means X and Y cannot start until W is completed)
 - With this notation construct the network diagram having the following constraints: (i)
 - B, D < F; C < G; B < H; E, G < I A < D, E;
 - Table below shows the time taken by each task in days.

| Task | A | B | C | D | E | F | G | H | I |
|------|----|---|----|----|----|----|----|---|----|
| Time | 23 | 8 | 20 | 16 | 24 | 18 | 19 | 4 | 10 |

- Find the minimum time required to complete the project. (ii)
- (iii) How many critical paths exists in this network and indicate both the critical paths?
- (iv) Calculate EST, EFT, LST, LFT, Total float, free float and Independent float for all the (16 Marks) non-critical activities (tasks).
- With reference to queuing system, explain briefly: 6 a.

(06 Marks)

- (i) Arrival pattern (ii) Service pattern b. Aircraft requests permission to land at a single runway airport on an average of one in every five minutes. Planes are landed on FCFS basis, with those not able to land immediately due to traffic congestion put in a holding pattern. The time required by the traffic controller to land the planes is expected to be exponentially distributed with a mean of 3 minute. Determine:
 - The average number of planes in a holding pattern. (i)
 - (ii) The average number of planes that have requested permission to land, but are still in motion.
 - (iii) The probability that an arriving plane will be on ground in less than 10 minutes after (14 Marks) first requesting permission to land.
- With reference to game theory, explain the following: a. (i) Modified dominance rule (ii) Fair game
- b. Find the range of P and Q in the following game to retain saddle point at (2, 2) location.

(04 Marks)

(04 Marks)

- Two players P and Q play a matching coins game in which each has 4 coins 1Rs., 2Rs., 5Rs. c. And Rs.10. If the sum of the coins is odd when they show each time without the knowledge of other, player P wins Q's amount. If coins sum is an even amount, player Q wins P's amount. Formulate the problem a game theory problem and find the best strategy for each player and game value. (12 Marks)
- List out the assumptions made while solving sequencing problem. 8 a.
 - b. Four jobs 1, 2, 3 and 4 are to be processed on each of the five machines A, B, C, D and E in the order A, B, C, D and E. Find the total minimum elapsed time for machining all the four jobs. Also find the idle time of each machine in hours. (16 Marks)

| Machines | | Jobs | | | | |
|----------|---|--------|---|---|--|--|
| | 1 | 2 | 3 | 4 | | |
| A | 7 | 6 | 5 | 8 | | |
| B | 5 | 6 6 | 4 | 3 | | |
| C | 2 | 4 | 5 | 3 | | |
| D | 3 | 5 | 6 | 2 | | |
| E | 9 | 10 | 8 | 6 | | |
