

**CONTENTS**

<b>Chapter 1: Introduction to Computer Networks</b>	<b>1–36</b>
1.1 Data Communications	1
1.2 A Communications Model	3
1.2.1 Tasks to be Accomplished in the Model	5
1.2.2 Classification of Communication	7
1.2.3 Example of data Communications—E-mail	7
1.3 What Is A Network?	7
1.4 Computer Network	8
1.4.1 How do Networks Fit into Computer Systems?	8
1.5 Goals Of Computer Networking	9
1.5.1 Primary Functions of Computer Networks	10
1.5.2 Advantages of Computer Networks	10
1.5.3 Disadvantages of Computer Networks	11
1.6 Network Hardware And Transmission Technology	11
1.6.1 Data Communication Networking	12
1.7 Network Classifications	12
1.8 Types Of Networks, By Size	14
1.8.1 Local Area Network (LAN)	14
1.8.2 Campus Networks	15
1.8.3 Wireless LANS	16
1.8.4 Metropolitan Area Network (MAN)	18
1.8.5 Wide Area Network (WAN)	18
1.8.6 Network Cloud	21
1.8.7 The Internet	21
1.9 Communication Between Processes	23
1.9.1 Master/Slave Communication	23
1.9.2 Peer-to-Peer Communication	23
1.9.3 Client/Server Communication	25
1.9.4 Comparing Communication Methods	27
1.10 Types Of Servers	27
1.10.1 File Servers	27
1.10.2 Application Servers	27
1.10.3 Server Blades	28
1.10.4 Information Appliances	28

1.11	How Servers Are Different To Desktop Computers?	30
1.12	What Is Networking Hardware?	31
1.13	What Is A Network Operating System?	35

**Chapter 2 : Network Topologies 37–50**

2.1	What Is A Topology?	37
2.2	Basic Architectures	38
2.3	Types Of Topologies	38
	2.3.1 Star Topology	38
	2.3.2 Ring Topology	40
	2.3.3 Mesh Topology	41
	2.3.4 Bus Topology	43
	2.3.5 Tree Topology	46
	2.3.6 Hybrid Topology	47
	2.3.7 Considerations When Choosing A Topology	47
2.4	Access Methods	48
	2.4.1 Contention	48
	2.4.2 Polling	49
	2.4.3 Token Passing	49

**Chapter 3 : Reference Models—OSI And TCP/IP 51–107**

3.1	Network Architecture	51
3.2	Programs, Processes, Protocols And Layers	51
3.3	Layer Structure And Protocol Hierarchies	52
	3.3.1 Principles of Layer Design	53
	3.3.2 Characteristics of Layers	54
	3.3.3 What is a Protocol?	55
	3.3.4 Characteristics of Protocols	56
	3.3.5 Functions of Protocols	57
	3.3.6 Different Types of Addresses used by Protocols	60
	3.3.7 Layers of Addresses	61
3.4	Interfaces And Services	62
	3.4.1 Service Primitives	63
	3.4.2 Services/Protocols Relations	64
	3.4.3 Connection-Oriented Services and Connectionless Services	64
	3.4.4 Interface	65
3.5	Reference Models	65
3.6	Open Systems Interconnection—Reference Model (OSI-RM)	66
	3.6.1 Evolution of OSI	67
	3.6.2 A brief introduction to the OSI Reference Model	67

3.6.3	What is OSI and what is not?	68
3.6.4	The OSI Environment	70
3.6.5	Functions of layers	71
3.6.6	Summary of OSI Model	84
3.6.7	The Data Transmission Through the OSI Model	84
3.7	TCP/IP Reference Model	86
3.7.1	TCP/IP Features	88
3.7.2	Functions of layers	88
3.8	Comparison And Contrast Between The OSI And TCP/IP Model	96
3.8.1	The Comparison of Different Layers	97
3.8.2	Summary of the Comparison of Layers in both Models	100
3.8.3	General Comparison	101
3.9	Criticism Of The Reference Models	103
3.9.1	Criticism of the OSI Model	103
3.9.2	The Future of the OSI Model	105
3.9.3	Critiques of TCP/IP Model	106

## Chapter 4 : Transmission Media

108–144

	Introduction	108
4.1	Few Important Points About the Electrical Interface	108
4.1.1	Bit-wise Data Transmission	109
4.2	Classification Of Transmission Media	109
4.2.1	Characteristics of a Medium	110
4.3	Magnetic Media	111
4.4	Twisted Pair	111
4.4.1	UTP Cable	113
4.4.2	STP Cable	114
4.5	Coaxial Cable	115
4.5.1	Baseband Coaxial Cable	119
4.5.2	Broadband Coaxial Cable	119
4.5.3	Uses of Coaxial Cable	121
4.6	Fibre Optics	122
4.6.1	Fibre Optic Cable	122
4.6.2	Single Mode Cable	125
4.6.3	Multimode Cable	125
4.6.4	Advantages and Disadvantages of Fiber Optics over Copper Wire	126
4.7	Cabling Summary	130
4.8	Wireless Transmission	131
4.8.1	The Electromagnetic Spectrum	135
4.8.2	Different Types of Unguided Media	136

IV

---

4.9	Radio Waves	137
4.10	Microwave Link Communication	139
4.11	Satellite Communication	140
4.12	Infrared Waves	143

**Chapter 5 Electromagnetic Signals and Modulation 145–178**

5.1	Electromagnetic Waves	145
5.2	Analog Communications	148
5.2.1	Analog Signals	148
5.3	Digital Communications	149
5.3.1	Digital Signals	149
5.4	Media And Propagation Of Signals	150
5.4.1	Transmitters, Receivers and Transmission Media	150
5.4.2	Carrier Signal	150
5.4.3	Analog Versus Digital Transmission : Which is Better?	151
5.4.4	Need of Amplifiers and Repeaters	152
5.4.5	The Conversion Process : Digital to Analog and Analog to Digital	154
5.5	Modulation	154
5.6	Analog Modulation Schemes	156
5.6.1	Amplitude Modulation	156
5.6.2	Frequency Modulation	158
5.6.3	Phase Modulation	160
5.7	Digital Modulation Schemes	161
5.7.1	Pulse Modulation Schemes	162
5.7.2	Keying Schemes	165
5.8	Introduction To Modems	168
5.8.1	Characteristics of Modems	169
5.8.2	Standards And Protocols	171
5.8.3	Types of Modems	171
5.8.4	Classification of Modems	173
5.8.5	A Look at the Future	177
5.8.6	Cable Modems	177
5.9	Codec	178

**Chapter 6 Switching Principles 179–196**

	Introduction	179
6.1	Switching Mechanism	179
6.2	Circuit Switching	181
6.3	Message Switching	184
6.4	Packet Switching	186

6.4.1	Datagram Packet Networks	189
6.4.2	Virtual Circuit Packet Networks	191
6.5	Comparison Of Various Techniques	193
6.6	Cell Relay	195
6.7	Applications Of Switching Techniques	195
<b>Chapter 7 : Multiplexing Techniques</b>		<b>197–211</b>
7.1	Telecommunication Fundamentals	197
7.2	Information On Multiplexing	198
7.3	Time Division Multiplexing (TDM)	199
7.3.1	Theory of Time Division Multiplexing	200
7.3.2	Some Examples of TDM Based Services	202
7.3.3	Benefits and Shortcomings of TDM	202
7.3.4	Statistical Time Division Multiplexing	202
7.4	Frequency Division Multiplexing (FDM)	204
7.4.1	Theory of Frequency Division Multiplexing	205
7.4.2	Advantages and Disadvantages of FDM Relative to TDM	206
7.4.3	OFDM (Orthogonal Frequency Division Multiplexing)	207
7.5	Wavelength Division Multiplexing (WDM)	208
7.5.1	WDM in Practice	208
7.5.2	Basic Operation	209
7.6	Comparison Of Multiplexing Techniques	210
<b>Chapter 8 : Telephone System and ISDN Services</b>		<b>212–242</b>
	Introduction To PSTN	212
8.1	Understanding PSTN Basics	216
8.1.1	Analog and Digital Signaling	216
8.1.2	Local Loops, Trunks and Interswitch Communication	218
8.1.3	PSTN Signaling	219
8.1.4	PSTN Services	221
8.1.5	Drawbacks to the PSTN	223
8.2	Introduction to ISDN	224
8.2.1	The Basics of ISDN	226
8.2.2	Use of ISDN	227
8.2.3	The future of ISDN	231
8.3	Broadband ISDN	232
8.4	Asynchronous Transfer Mode (ATM)	233
8.4.1	Overview of ATM	234
8.4.2	ATM Technology	235
8.4.3	Basic Concepts in ATM	238

8.4.4	ATM Switching	239
8.4.5	Benefits of ATM	240

## **Chapter 9 : Data Link Layer** **243–277**

	Introduction	243
9.1	Purpose of Data Link Layer	244
9.2	Design Issues	245
9.3	Error Detection And Correction	250
	9.3.1 Error Detection	251
	9.3.2 Error Correction	254
	9.3.3 Burst Errors	259
9.4	Elementary Data Link Protocols	259
	9.4.1 An Unrestricted Simplex Protocol / Utopia	260
	9.4.2 Simplex Stop-and-Wait Protocol	262
	9.4.3 A Simplex Protocol For A Noisy Channel	264
9.5	Sliding Window Protocols	266
	9.5.1 Parameters for a Sliding Window	268
	9.5.2 Stop-and-Wait—One Bit Sliding Window Protocol	270
	9.5.3 Go-Back-n	270
	9.5.4 Selective Repeat	272
9.6	Examples Of DLL Protocols	272
	9.6.1 HDLC : High Level Data Link Control	272
	9.6.2 Data Link Layer in the Internet	275
	9.6.2.1 SLIP—Serial Line IP	275
	9.6.2.2 PPP—Point-to-Point Protocol	276

## **Chapter 10 : Multiple Access Protocols** **278–293**

	Introduction	278
10.1	Channel Allocation	280
10.2	The ALOHA Random Access Protocol	281
	10.2.1 Pure (Unslotted) ALOHA-1	282
	10.2.2 An Improvement : Slotted ALOHA	283
10.3	Carrier Sense Multiple-Access (CSMA) Protocols	284
10.4	Carrier Sense Multiple Access/Collision Detection (CSMA/CD)	287
10.5	Collision Free Protocols	289
	10.5.1 A Bit-Map Protocol	290
	10.5.2 Binary Countdown	290
10.6	Token And Token-Passing Access Methods	291
10.7	Polling Systems	292

**Chapter 11 : Introduction to LAN And MAN Protocols****294–330**

Introduction	294
11.1 IEEE 802 Standards	295
11.2 Higher Layer LAN Protocols (IEEE 802.1)	297
11.3 LLC : Logic Link Control (IEEE 802.2)	297
11.4 Ethernet (IEEE 802.3)	299
11.4.1 General Ethernet Features	299
11.4.2 Ethernet Network Elements	301
11.4.3 The Basic Ethernet Frame Format	301
11.4.4 Frame Transmission	302
11.4.5 Objective	303
11.4.6 Specifications of Ethernet	305
11.5 Token Ring (IEEE 802.5)	306
11.5.1 Features	307
11.5.2 Frame Format	307
11.5.3 Ring Management	309
11.5.4 Objective	310
11.6 Token Bus (IEEE 802.4)	314
11.6.1 Token Bus Frame Format	315
11.6.2 Token Bus Operation	315
11.7 Comparison Of Various IEEE Standards	317
11.7.1 Token Ring IEEE 802.5 Vs Ethernet IEEE 802.3	317
11.7.2 Token Ring IEEE 802.5 Vs Token Bus IEEE 802.4	317
11.7.3 Comparison of 802.3, 802.4, and 802.5	318
11.8 Distributed Queue Dual Bus-DQDB (IEEE 802.6)	319
11.8.1 Architecture of DQDB	319
11.9 CSMA/CA medium access protocol (IEEE 802.11)	321
11.9.1 IEEE 802.11 Architectures	323
11.10 Fiber Distributed Data Interface (FDDI)	324
11.10.1 Features of FDDI	325
11.10.2 FDDI Transmission Media	325
11.10.3 FDDI Frame Format	325
11.10.4 Operation of FDDI	327
11.10.5 FDDI Specifications	329
11.11 Copper Distributed Data Interface (CDDI)	330

**Chapter 12 : Network Layer****331–392**

Introduction	331
12.1 Design Issues for the Network Layer	331
12.2 The Internal Organization Of The Network Layer	333

	12.2.1	Comparison of Datagrams and Virtual Circuits	334
12.3		Routing	334
	12.3.1	Routing Components	335
	12.3.2	Routing Protocols	337
12.4		Routing Algorithms	337
	12.4.1	Shortest Path Algorithm	339
	12.4.2	Flooding	340
	12.4.3	Random Routing	342
	12.4.4	Flow Based Routing	343
	12.4.5	Hierarchical Routing	343
	12.4.6	Broadcasting	345
	12.4.7	Dynamic Routing	346
		12.4.7.1 Distance vector routing	346
		12.4.7.2 Link-state routing	353
	12.4.8	Comparing Distance-Vector Protocols to Link-State Routing Protocols	361
12.5		Congestion Control	363
	12.5.1	Flow Control vs. Congestion Control	364
	12.5.2	Causes of Congestion	365
	12.5.3	Types of Congestion Control	368
		12.5.3.1 Preallocation of Resourcing	368
		12.5.3.2 Packet Discarding Load Shedding	369
		12.5.3.3 Isarithmic Congestion Control	370
		12.5.3.4 Choke Packets	371
		12.5.3.5 Traffic Shaping	373
		12.5.3.6 Flow Specification	378
12.6		The IP Protocol	378
	12.6.1	Characteristics of IP	379
	12.6.2	IP Packet Format	379
	12.6.3	IP Addressing	381
12.7		An Introduction to IPv6: The New Internet Protocol	382
	12.7.1	Why IPv6?	383
	12.7.2	IPv6 Header Format	384
	12.7.3	IPv6 Addressing	385
12.8		Address Resolution Protocol	389
12.9		Reverse Address Resolution Protocol (RARP)	390
12.10		Internet Control Message Protocol (ICMP)	391

## Chapter 13 : Internetworking Devices

393–419

13.1		The Concept Of Internetworking	393
	13.1.1	Why Internetworking?	395

13.2	Introduction To Internetworking Devices	395
13.3	Repeaters	397
13.3.1	How Repeaters Work?	398
13.4	Hubs	399
13.5	Bridges	400
13.5.1	How Bridges Work?	401
13.5.2	Functions of Bridges	402
13.5.3	Classification of Bridges	403
13.6	Switches	410
13.6.1	Types of Switches	411
13.7	Routers	413
13.7.1	Router Responsibilities	414
13.7.2	Routers Versus Bridges	415
13.8	Brouters	416
13.9	Gateways	417
 <b>Chapter 14 : Transport Layer</b>		<b>420–444</b>
	Introduction	420
14.1	Transport Layer Characteristics	421
14.1.1	Transport Layer Vs. DLL Layer	422
14.1.2	Services Provides by Transport Layer	422
14.1.3	Elements of Transport Protocols	423
14.1.4	Functions of the Transport Layer	424
14.1.5	Transport Layer Protocols	426
14.2	Ports	427
14.2.1	Classification of Ports	428
14.3	Client Server Model	430
14.4	Transmission Control Protocol (TCP)	431
14.4.1	Aspects of TCP	433
14.4.2	TCP Header Format	434
14.4.3	Protocol Operation in Detail	436
14.5	User Datagram Protocol (UDP)	439
14.5.1	UDP Header Format	440
14.5.2	Applications	442
14.6	The Stream Control Transmission Protocol (SCTP)	442
14.7	The Datagram Congestion Control Protocol (DCCP)	443
 <b>Chapter 15 : Session and Presentation layer</b>		<b>445–463</b>
	Introduction To The Session layer	445
15.1	Design Issues Of Session Layer	447

15.2	Session Layer Protocols	447
15.2.1	Remote Procedure Call (RPC)	450
15.3	Introduction To The Presentation Layer	454
15.4	Design Issues Of Presentation Layer	454
15.4.1	Data Formatting	456
15.4.2	Data Encryption	457
15.4.3	Data Compression	458
15.4.3.1	Basic Compression Techniques	459
15.4.3.2	Graphics/Video Compression	462
<b>Chapter 16 : Application Layer</b>		<b>464–491</b>
	Introduction	464
16.1	FTP : File Transfer Protocol	466
16.2	HTTP : Hyper Text Transfer Protocol	468
16.3	DNS : Domain Name Service	469
16.4	RTSP : Real Time Streaming Protocol	473
16.4.1	Real Time Transport Protocol (RTP)	474
16.4.2	Real Time Control Protocol (RTCP)	474
16.5	SSL: Secure Sockets Layer	474
16.6	SIP: Session Initiation Protocol	475
16.7	Internet e-mail Protocols	476
16.7.1	Introduction to Internet	476
16.7.2	Introduction to e-mail	478
16.7.3	SMTP : The Simple Mail Transfer Protocol	481
16.7.4	POP : Post Office Protocol	482
16.7.5	IMAP : Internet Message Access Protocol	483
16.7.6	MIME Protocol : Multipurpose Internet Mail Extensions	484
16.8	Telnet	485
16.9	SNMP : Simple Network Management Protocol	487
<b>Chapter 17 : Network Security</b>		<b>492–523</b>
	Introduction to Network Security	492
17.1	Need of Network Security	493
17.1.1	Security Threats and Attacks	494
17.1.2	Security Management Techniques	497
17.2	Cryptography	499
17.2.1	Classical Cryptographic Techniques	499
17.2.2	Encryption	500
17.2.2.1	Conventional Encryption	502
17.2.2.2	Public-key Encryption	503

17.2.3	Authentication	503
17.2.3.1	Digital Signature	503
17.2.3.2	Hash Functions	505
17.3	RSA Algorithm	507
17.4	DES (Data Encryption Standard)	510
17.5	Network Firewall	514
17.5.1	Need of Firewall	516
17.5.2	Basic Types of Firewalls	519
17.5.3	Firewall Architectures	520
 <b>Chapter 18 : Some Network Standards</b>		 <b>524–546</b>
	Introduction To Standards	524
18.1	International Standards Bodies : ITU-T (formerly CCITT)	525
18.2	Introduction To X.25	525
18.2.1	X.25 Devices and Protocol Operation	526
18.2.2	Levels of X.25	528
18.2.3	The X.25 Protocol Suite	533
18.2.4	User Services	535
18.3	Introduction To X.400	536
18.3.1	X.400 Components	537
18.3.2	X.400 Protocols	538
18.3.3	Advantages of X.400	538
18.3.4	Disadvantages of X.400	539
18.3.5	X.400 vs. SMTP	539
18.4	Introduction To X.500	540
18.4.1	Protocols	541
18.4.2	Key features of X.500	541
18.5	FTAM : File Transfer Access And Management Protocol	542
18.6	VTAM : Virtual Telecommunications Access Method	544
 <b>Exercise</b>		 <b>547–554</b>
 <b>Index</b>		 <b>555–564</b>
