| LIST OF CONTRIBUTORS | x |
| PREFACE | xi |
| 1 INTRODUCTION TO COMPUTERS IN MEDICINE | 1 |
| 1.1 Characteristics of medical data | 1 |
| 1.2 What is a medical instrument? | 2 |
| 1.3 Iterative definition of medicine | 4 |
| 1.4 Evolution of microprocessor-based systems | 5 |
| 1.5 The microcomputer-based medical instrument | 13 |
| 1.6 Software design of digital filters | 16 |
| 1.7 A look to the future | 22 |
| 1.8 References | 22 |
| 1.9 Study questions | 23 |
| 2 ELECTROCARDIOGRAPHY | 24 |
| 2.1 Basic electrocardiography | 24 |
| 2.2 ECG lead systems | 39 |
| 2.3 ECG signal characteristics | 43 |
| 2.4 Lab: Analog filters, ECG amplifier, and QRS detector | 44 |
| 2.5 References | 53 |
| 2.6 Study questions | 53 |
| 3 SIGNAL CONVERSION | 55 |
| 3.1 Sampling basics | 55 |
| 3.2 Simple signal conversion systems | 59 |
| 3.3 Conversion requirements for biomedical signals | 60 |
| 3.4 Signal conversion circuits | 61 |
| 3.5 Lab: Signal conversion | 74 |
| 3.6 References | 75 |
| 3.7 Study questions | 75 |

4 BASICS OF DIGITAL FILTERING 78

- 4.1 Digital filters 78
- 4.2 The z transform 79
- 4.3 Elements of a digital filter 81
- 4.4 Types of digital filters 84
- 4.5 Transfer function of a difference equation 85
- 4.6 The z-plane pole-zero plot 85
- 4.7 The rubber membrane concept 89
- 4.8 References 98
- 4.9 Study questions 98

5 FINITE IMPULSE RESPONSE FILTERS 100

- 5.1 Characteristics of FIR filters 100
- 5.2 Smoothing filters 103
- 5.3 Notch filters 111
- 5.4 Derivatives 111
- 5.5 Window design 117
- 5.6 Frequency sampling 119
- 5.7 Minimax design 120
- 5.8 Lab: FIR filter design 121
- 5.9 References 123
- 5.10 Study questions 123

6 INFINITE IMPULSE RESPONSE FILTERS 125

- 6.1 Generic equations of IIR filters 125
- 6.2 Simple one-pole example 126
- 6.3 Integrators 130
- 6.4 Design methods for two-pole filters 136
- 6.5 Lab: IIR digital filters for ECG analysis 144
- 6.6 References 145
- 6.7 Study questions 145

7 INTEGER FILTERS 151

- 7.1 Basic design concept 151
- 7.2 Low-pass integer filters 157
- 7.3 High-pass integer filters 158
- 7.4 Bandpass and band-reject integer filters 160
- 7.5 The effect of filter cascades 161
- 7.6 Other fast-operating design techniques 162
- 7.7 Design examples and tools 164

| | | |
|------|---------------------------------------|-----|
| 7.8 | Lab: Integer filters for ECG analysis | 170 |
| 7.9 | References | 171 |
| 7.10 | Study questions | 171 |

8 ADAPTIVE FILTERS 174

| | | |
|-----|--|-----|
| 8.1 | Principal noise canceler model | 174 |
| 8.2 | 60-Hz adaptive canceling using a sine wave model | 175 |
| 8.3 | Other applications of adaptive filtering | 180 |
| 8.4 | Lab: 60-Hz adaptive filter | 181 |
| 8.5 | References | 182 |
| 8.6 | Study questions | 182 |

9 SIGNAL AVERAGING 184

| | | |
|-----|--------------------------------------|-----|
| 9.1 | Basics of signal averaging | 184 |
| 9.2 | Signal averaging as a digital filter | 189 |
| 9.3 | A typical averager | 189 |
| 9.4 | Software for signal averaging | 190 |
| 9.5 | Limitations of signal averaging | 190 |
| 9.6 | Lab: ECG signal averaging | 192 |
| 9.7 | References | 192 |
| 9.8 | Study questions | 192 |

10 DATA REDUCTION TECHNIQUES 193

| | | |
|------|------------------------------------|-----|
| 10.1 | Turning point algorithm | 194 |
| 10.2 | AZTEC algorithm | 197 |
| 10.3 | Fan algorithm | 202 |
| 10.4 | Huffman coding | 206 |
| 10.5 | Lab: ECG data reduction algorithms | 211 |
| 10.6 | References | 212 |
| 10.7 | Study questions | 213 |

11 OTHER TIME- AND FREQUENCY-DOMAIN TECHNIQUES 216

| | | |
|------|---|-----|
| 11.1 | The Fourier transform | 216 |
| 11.2 | Correlation | 222 |
| 11.3 | Convolution | 226 |
| 11.4 | Power spectrum estimation | 230 |
| 11.5 | Lab: Frequency-domain analysis of the ECG | 233 |
| 11.6 | References | 235 |
| 11.7 | Study questions | 235 |

| | |
|--|------------|
| 12 ECG QRS DETECTION | 236 |
| 12.1 Power spectrum of the ECG | 236 |
| 12.2 Bandpass filtering techniques | 237 |
| 12.3 Differentiation techniques | 241 |
| 12.4 Template matching techniques | 242 |
| 12.5 A QRS detection algorithm | 246 |
| 12.6 Lab: Real-time ECG processing algorithm | 262 |
| 12.7 References | 263 |
| 12.8 Study questions | 263 |
| 13 ECG ANALYSIS SYSTEMS | 265 |
| 13.1 ECG interpretation | 265 |
| 13.2 ST-segment analyzer | 271 |
| 13.3 Portable arrhythmia monitor | 272 |
| 13.4 References | 280 |
| 13.5 Study questions | 281 |
| 14 VLSI IN DIGITAL SIGNAL PROCESSING | 283 |
| 14.1 Digital signal processors | 283 |
| 14.2 High-performance VLSI signal processing | 286 |
| 14.3 VLSI applications in medicine | 290 |
| 14.4 VLSI sensors for biomedical signals | 291 |
| 14.5 VLSI tools | 293 |
| 14.6 Choice of custom, ASIC, or off-the-shelf components | 293 |
| 14.7 References | 293 |
| 14.8 Study questions | 294 |
| A CONFIGURING THE PC FOR UW DIGISCOPE | 295 |
| A.1 Installing the RTD ADA2100 in an IBM PC | 297 |
| A.2 Configuring the Motorola 68HC11EVBU | 299 |
| A.3 Configuring the Motorola 68HC11EVB | 303 |
| A.4 Virtual input/output device (data files) | 305 |
| A.5 Putting a header on a binary file: ADDHEAD | 305 |
| A.6 References | 306 |
| B DATA ACQUISITION AND CONTROL ROUTINES | 307 |
| B.1 Data structures | 308 |
| B.2 Top-level device routines | 309 |
| B.3 Internal I/O device (RTD ADA2100) | 309 |

| | | |
|--------------|--|------------|
| B.4 | External I/O device (Motorola 68HC11EVB) 311 | |
| B.5 | Virtual I/O device (data files) 313 | |
| B.6 | References 316 | |
| C | DATA ACQUISITION AND CONTROL—SOME HINTS | 317 |
| C.1 | Internal I/O device (RTD ADA2100) 318 | |
| C.2 | External I/O device (Motorola 68HC11EVB) 320 | |
| C.3 | Virtual I/O device (data files) 324 | |
| C.4 | Writing your own interface software 327 | |
| C.5 | References 331 | |
| D | UW DIGISCOPE USER'S MANUAL | 332 |
| D.1 | Getting around in UW DigiScope 332 | |
| D.2 | Overview of functions 334 | |
| E | SIGNAL GENERATION | 342 |
| E.1 | Signal generation methods 342 | |
| E.2 | Signal generator program (GENWAVE) 343 | |
| F | FINITE-LENGTH REGISTER EFFECTS | 346 |
| F.1 | Quantization noise 346 | |
| F.2 | Limit cycles 348 | |
| F.3 | Scaling 351 | |
| F.4 | Roundoff noise in IIR filters 352 | |
| F.5 | Floating-point register filters 353 | |
| F.6 | Summary 354 | |
| F.7 | Lab: Finite-length register effects in digital filters 355 | |
| F.8 | References 355 | |
| G | COMMERCIAL DSP SYSTEMS | 356 |
| G.1 | Data acquisition systems 356 | |
| G.2 | DSP software 357 | |
| G.3 | Vendors 359 | |
| G.4 | References 360 | |
| INDEX | | 361 |
