

Contents

Preface

1 Introduction

- 1.1 Motivation
 - 1.2 Why is computer vision difficult?
 - 1.3 Image representation and image analysis tasks
- Summary

2 The image, its representations and properties

- 2.1 Image representations, a few concepts
 - 2.2 Image digitization
 - 2.3 Digital image properties
 - 2.4 Color images
 - 2.5 Cameras: an overview
- Summary

3 The image, its mathematical and physical background

- 3.1 Overview
 - 3.2 Linear integral transforms
 - 3.3 Images as stochastic processes
 - 3.4 Image formation physics
- Summary

4 Data structures for image analysis

- 4.1 Levels of image data representation
 - 4.2 Traditional image data structures
 - 4.3 Hierarchical data structures
- Summary

5 Image pre-processing

- 5.1 Pixel brightness transformations
 - 5.2 Geometric transformations
 - 5.3 Local pre-processing
 - 5.4 Image restoration
- Summary

6	Segmentation I	153
6.1	Thresholding	153
6.2	Edge-based segmentation	161
6.3	Region-based segmentation	194
6.4	Matching	205
6.5	Evaluation issues in segmentation	208
	Summary	213
7	Segmentation II	216
7.1	Mean Shift Segmentation	216
7.2	Active contour models—snakes	223
7.3	Geometric deformable models—level sets and geodesic active contours	232
7.4	Fuzzy Connectivity	239
7.5	Towards 3D graph-based image segmentation	245
7.6	Graph cut segmentation	252
7.7	Optimal single and multiple surface segmentation	258
	Summary	268
8	Shape representation and description	270
8.1	Region identification	273
8.2	Contour-based shape representation and description	276
8.3	Region-based shape representation and description	289
8.4	Shape classes	305
	Summary	306
9	Object recognition	308
9.1	Knowledge representation	309
9.2	Statistical pattern recognition	313
9.3	Neural nets	328
9.4	Syntactic pattern recognition	333
9.5	Recognition as graph matching	339
9.6	Optimization techniques in recognition	344
9.7	Fuzzy systems	349
9.8	Boosting in pattern recognition	356
	Summary	359
10	Image understanding	362
10.1	Image understanding control strategies	363
10.2	RANSAC: Fitting via random sample consensus	371
10.3	Point distribution models	374
10.4	Active Appearance Models	383
10.5	Pattern recognition methods in image understanding	393
10.6	Boosted cascade of classifiers for rapid object detection	399
10.7	Scene labeling and constraint propagation	403
10.8	Semantic image segmentation and understanding	409
10.9	Hidden Markov models	419
10.10	Gaussian mixture models and expectation-maximization	427
	Summary	434
