Contents

Preface 19

CHAPTER 1 **Introduction** 21

Three Generations of Digital Transport Networks 21
All Features Are Not Yet Available 24
Optical Fiber Capacity 24
A Brief Introduction to WDM and TDM 27
Combining WDM and TDM 28
The Optical Marketplace 29
The Local Loop Bottleneck Must Be Solved 30
Expansion of Network Capacity 33
Wireless Optical Systems 34
Key Optical Nodes 35
Key Terms for the Cross-connect 36
Other Key Terms 37
Another Look at the Optical Node 38
Evolution of Optical Systems 40
Key Attributes of Optical Fiber 41
Summary 42

CHAPTER 2 The Telecommunications Infrastructure 43

The Local Connections 43
The Backbone Connections 44
The Digital Multiplexing Hierarchy 46
The Digital Signaling Hierarchies 48
T1 or DS1; T3 or DS3? 50
The Layered Protocol Model
in the Transport Network 51
Considerations for Interworking Layer 1, Layer 2,
and Layer 3 Networks 52
Summary 53

CHAPTER 3 Characteristics of Optical Fiber 54

The Basics 54
The Wavelength 55
The Basic Components 56
The Source of the Signal 56
The Detector 58
Structure of the Fiber 58
Angles 58
Fiber Types 60
Key Performance Properties of Fiber 62
Attenuation 62
Amplifier Spontaneous Emission (ASE) 63
Chromatic Dispersion 64
Polarization-mode Dispersion (PMD) 67
Lasers 69
Summary 69

CHAPTER 4 Timing and Synchronization 70

Timing and Synchronization in Digital Networks 70
Effect of a Timing Error 72
The Clocking Signal 72
Types of Timing in Networks 72
The Synchronous Clock Hierarchy 74
Timing Variations 75
Frequency Accuracy 76

Methods of Clock Exchange 77
Free-Running 77
Line-Timed 78
Loop-Timed 78
External 79
Through-Timed 81
Distribution of Timing Using SONET and DS1 83
Timing Downstream Devices 84
The Building Integrated Timing Supply (BITS) 85
Synchronization Status Messages (SSMs) and Timing Loops 88
Summary 90

CHAPTER 5 **SONET and SDH** 91

How SONET and SDH Came into Being 91
Participation by ITU-T 93
Reasons for Success of SONET/SDH 93
The SONET Multiplexing Hierarchy 94
SONET and SDH Multiplexing Structure 95
The SONET/SDH Frame Structure 96
Rationale for the 51.840 Mbit/s Envelope 97
Overhead and User Areas in the Envelope 99
SONET and SDH Functional Components 100
SONET and SDH Problem Detection 100
Locating and Adjusting Payload with Pointers 102
Virtual Tributaries in More Detail 102
Virtual Tributaries and Virtual Containers 105
The Overhead Bytes 105
SONET and SDH Concatenation 108
Summary 108

CHAPTER 6 **Architecture of Optical Transport Networks (OTNs)** 109

The Digital Wrapper 109
Control Planes 111
In-band and Out-of-band Control Signaling 113
An In-band Signal on an O/O/O PXC 115
Importance of Multiplexing and Multiplexing Hierarchies 115
Current Digital Transport Hierarchy 116

SONET Multiplexing Hierarchy 117
SDH Multiplexing Hierarchy 117
Revised SDH Transport Hierarchy 119
Key Indexes and Other Terms 121
The New Optical Transport and Digital Transport Hierarchy 122
ODUk Mapping and Multiplexing 122
The OTN Layered Model 123
Another View 125
Full Functionality Stack: OTM-n.m 126
Reduced Functionality Stack: OTM-nr.m and OTM-0.r 126
Encapsulation and Decapsulation Operations 128
Generic Framing Procedure (GFP) 130
Summary 131

CHAPTER 7 **Wavelength Division Multiplexing (WDM)** **132**

The WDM Operation 132
Dense Wave Division Multiplexing (DWDM) 134
TDM and WDM Topologies 135
Relationship of WDM to SONET/SDH 136
Erbium-doped Fiber (EDF) 137
WDM Amplifiers 137
Gain Flatness 138
Add-Drop Multiplexers 139
WADM Input and Output Ports 140
WDM Cross-connects 142
Wavelength Continuity Property 143
Example of DWDM Wavelength Plan 143
Average Versus Maximum Span Loss and Chromatic Dispersion 143
Higher Dispersion for DWDM 145
Tunable DWDM Lasers 146
Summary 146

CHAPTER 8 **Network Topologies and Protection Schemes** **147**

The Non-negotiable Requirement: Robust Networks 147
Diversity in the Network: Which Control Plane? 148

Line and Path Protection Switching 149
Types of Topologies 149
Working and Protection Fibers 150
Point-to-Point Topology 152
1:N Protection Channel Sharing 153
Optical Channel Concatenation 154
Bi-directional Line-Switched Ring (BLSR) 157
Protection Switching on Four-Fiber BLSR 159
Meshed Topologies 162
Passive Optical Networks (PONs) 165
Optical Ethernets and Ethernet PONs 166
Ethernet in the Wide Area Backbone? 167
Metro Optical Networking 167
Summary 168

CHAPTER 9 **MPLS and Optical Networks**

What IS Label Switching? 169
Reasons for Using Label Switching 170
The Forwarding Equivalence Class (FEC) 171
Scalability and Granularity: Labels and Wavelengths 171
Types of MPLS Nodes 172
Label Distribution and Binding 173
Methods for Label Distribution 173
Label Swapping and Traffic Forwarding 174
MPLS Support of Virtual Private Networks (VPNs) 175
MPLS Traffic Engineering (TE) 176
Traffic Oriented or Resource Oriented Performance 176
Traffic Trunks, Traffic Flows, and Label Switched Paths 177
LDP, CR-LDP, RSVP-TE, and OSPF (Extensions) for TE Support 177
Multiprotocol Lambda Switching (MPIS) 177
Relationships of OXC and MPLS Operations 179
MPLS and Optical Wavelength Correlation 180
Failure of the Optical Connection 181
MPLS and Optical TE Similarities 182
Possibilities for the MPIS Network 183

Control and Data Planes Interworking 185
Summary 185

CHAPTER 10 **Architecture of IP and MPLS-based Optical Transport Networks** **186**

IP, MPLS, and Optical Control Planes 186
The Internet Control and Data Planes 187
The MPLS Control and Data Planes 187
The Optical Control and Data Planes 188
Interworking the Three Control Planes 189
Management of the Planes 191
Diverse Views on Control Planes' Interworkings 192
A Framework for IP over Optical Networks 192
Two General Models 193
Domain Services Model 193
Unified Service Model 194
Interconnections for IP over Optical 194
An Opposing View 195
Which Approaches to Use? 196
Generalized MPLS (GMPLS) Use in Optical Networks 196
Considerations for Interworking Layer 1 Lambdas and Layer 2 Labels 197
Examples of GMPLS Operations 198
Suggested Labels for the Wavelengths 202
Bi-directional LSPs in Optical Networks 203
Link Protection 203
The Next Horizon: GMPLS Extensions for G.709 204
Technology Independent Part 204
Technology Dependent Part 205
OTM Overhead Signal (OOS) 206
Transparency 207
G.709 Label Space 207
OCh Label Space 208
Applications 209
ODUk General Communication Channel (GCC) 209
A More Immediate Horizon: GMPLS with SONET and SDH 210
Traffic Parameters 210
Summary 212

CHAPTER 11 **The Link Management Protocol (LMP)** **213**

Keep the Optical Link Up and Running 213
What is Managed 214
Data-bearing Links 215
Clarification of Terms 215
Basic Functions of LMP 216
LMP Messages 216
LMP Message Header 216
LMP TLVs 218
The Fields in the LMP Messages 218
Control Channel Management 219
Parameter Negotiation 220
The Hello Protocol 221
Link Property Correlation 223
Link Connectivity Verification 224
Fault Management 227
Extending LMP Operations for Optical Link Systems (OLSs) 228
Link Summarization 230
Fault Management 231
Trace Monitoring 231
Summary 231

CHAPTER 12 **Optical Routers: Switching in Optical Internets** **232**

The State of the Art in Optical Switching 232
Order of Preferences in Switching Implementations 233
Clarification of Key Terms 233
One Aftermath of September 11: Increasing Load on the Transport Networks 234
Evolution of Switching Technologies 234
The Speeds of Electronics and Photonics 236
An Optical Router 237
The Control Element 237
Optical Switching Technologies 242
Optical Resources 242
MicroElectroMechanical Systems (MEMS) 242
Protecting the Label Switched Path 245
Protection of the Optical Switched Path (OSP) 247

Correlating the Wavelength OSP with the MPLS LSP 250
Setting up the OSPs and LSPs Between Nodes H, I, and J 251
Setting Up a Protection Path Between Nodes H, G, and J 252
Recovery and Use of Protection Path 253
Expanding the Roles of Nodes G and I 254
Nesting the LSPs and OSPs 255
Topology Choices for a Node Failure 257
Plane Coupling and De-coupling 257
Some End-to-End Wavelengths and Some Node-to-Node Wavelengths 258
Granularity of Labels vs. Wavelength Support 258
Approach to the Problem of LSP and OSP Interworking 259
MEMS and Optical Switching Re-examined 260
Thermo-optic Switches 261
Bubble Switches 262
Summary 262

CHAPTER 13 **ASON Operations at the User Network Interface (UNI) and the Network-to-Network Interface (NNI) 263**

Objectives of the ASON 263
The UNI and the NNI 265
Managing the Optical Bandwidth in the ASON 265
The General Approach to Optical Bandwidth Management 266
IETF Optical Carrier Framework for the UNI 267
Focus on OC-48/STM-16 and Above 268
UNI-SR (Subrates) 269
Types of Connections 269
Connection Attributes 270
Identification Attributes 270
Connection Characteristic Attributes 271
Routing Constraints Attributes 272
The Network-to-Network Interface (NNI) 272
NNI Signaling Requirements 274
Neighbor Discovery 275
NNI Topology and Resource Distribution Protocol 275

NNI Protocol Mechanisms 276
UNI and NNI Signaling Services 276
Summary 278

CHAPTER 14 **ATM vs. IP in Optical Internets** 279

IP over ATM over SONET 279
The OSI and Internet Layered Models 280
Placement of Core Protocols 283
PPP and L2TP 283
ATM in the SONET/SDH Payload Envelope 285
PPP in the SONET Payload Envelope 285
Prevalent Approach in Today's Internets 287
Encapsulation/Framing Rules 287
ATM and Frame Relay Framing Formats 288
Encapsulation Field Values 289
Encapsulation Options with SNAP 290
The PPP Packet 292
The ATM vs. IP Debate 293
Overhead of IP and ATM 294
Is the ATM Overhead Tolerable? 295
Three Encapsulation Methods 296
Method 1: Conventional Approach 296
Method 2: Lightweight PPP 297
Method 3: Eliminating ATM 299
Summary 299

CHAPTER 15 **Optical Internets: Evolving to a 3G Architecture** 301

Migration to IP Optical Networking 301
IP and the Optical Backbone 302
Example of IP and λ Forwarding 303
IP Subnets 305
Support of Non-optical Nodes 306
Placing MPLS into the Picture 309
Putting It Together 313
IP Routing Table 315
MPLS Cross-connect Table: Interface a 315
Optical Cross-connect Table: Interface a 316
Optical Cross-connect Table: Interface b 319

MPLS Cross-connect Table: Interface b 319
IP Routing Table 319
Issues in MPLS/Optical Plane Interworking 320
Protocol Stack Alternatives 321
Revisiting the Digital Wrapper 322
Internetworking SS7 and Legacy Transport Networks and the Internet 323
Reinvention or Use of the Telco Platform 323
The Integration of the Telephone and Internet Service Providers 324
The Internet Transport Network Protocol Stack 325
Conclusions 328

Appendix A The T1 Family **329**

References **337**

Acronyms **340**

Index **344**
