

## PREFACE

*I am very happy to present this student friendly text book **ENGINEERING MATHEMATICS-I** on this auspicious day of Vinayaka Chaturthi. This self explanatory comprehensive book is in accordance with the VTU syllabus w.e.f the year 2010-11. It also caters to the need of autonomous institutions in Karnataka and other technological universities in the country. Student requirement and aspirations are the prime factors kept in mind in the compilation of this book in a lucid way.*

*Two of my conscious senior colleagues in the department **Dr. D. Mamta** and **Ms. G. V. Pankaja** have shouldered the responsibility in my effort to make this book error free. I am highly thankful to them in this regard.*

*I am very much indebted to **Mr. K.V. Balakrishna** of **M/s. Sudha Publications** for the immense confidence in my authorship, continuously publishing my books for the last 14 years accepting all my suggestions.*

*Systematic approach by way of computer type setting work racing with the time by **Sri. S. Raghunandan** and his team of **M/s. Allkind** is highly commendable.*

*I thank the printers for the quality offset printing.*

*I am confident that the esteemed readers will bestow the same kind of response as in the past. I will humbly receive all the comments and valuable suggestions from the community of readers.*

**September 11th 2010**

**K.S.Chandrashekar**

**Mysore - 8**

## REWARD

*VTU students of the current scheme w.e.f 2010-11, scoring 125/125 in all four papers of Engineering Mathematics I to IV Semesters (10 MAT 11, 21, 31, 41) will be rewarded with a cash prize of Rs.7,500/- by the author. Please write to the author directly along with attested xerox copies of marks cards of all the four semesters.*

---

**Achiever: Mr. Bharath M.V, a student from 2006 batch of E&C branch from PESIT, Bangalore, received cash prize during 2008.**

**SYLLABUS**  
**ENGINEERING MATHEMATICS - I**

**Code : 10 MAT 11**  
**Hrs/Week : 04**  
**Total Hrs : 52**

**IA Marks : 25**  
**Exam Hrs : 03**  
**Exam Marks : 100**

**PART - A**

**Unit - I: Differential Calculus - 1**

Determination of  $n^{\text{th}}$  derivative of standard functions (Illustrative examples). Leibnitz's theorem (without proof) and problems.

Rolle's theorem - Geometrical interpretation. Lagrange's and Cauchy's mean value theorems. Taylor's and Maclaurin's-series expansions of functions of one variable (without proof). **[6 hours]**

**Unit - II: Differential Calculus - 2**

Indeterminate forms - L'Hospital's rule (without proof), Polar curves : Angle between polar curves; Pedal equation for polar curves. Derivative of arc length - concept and formulae without proof. Radius of curvature - Cartesian, parametric, polar and pedal forms. **[7 hours]**

**Unit - III: Differential Calculus - 3**

Partial differentiation : Partial derivatives, total derivative and chain rule. Jacobians - direct evaluation.

Taylor's expansion of a function of two variables-Illustrative examples. Maxima and Minima for function of two variables, Applications - Errors and Approximations.

**[6 hours]**

**Unit - IV: Vector Calculus**

Scalar and vector point functions - Gradient, Divergence, Curl, Laplacian, Solenoidal and Irrotational vectors. Vector Identities :  $\text{div}(\phi \vec{A})$ ,  $\text{Curl}(\phi \vec{A})$ ,  $\text{Curl}(\text{grad } \phi)$ ,  $\text{div}(\text{Curl } \vec{A})$ ,  $\text{div}(\vec{A} \times \vec{B})$  and  $\text{Curl}(\text{Curl } \vec{A})$ .

Orthogonal Curvilinear Coordinates - Definition, unit vectors, scale factors, orthogonality of cylindrical and spherical systems. Expression for Gradient, Divergence, Curl, Laplacian in an orthogonal system and also in cartesian, cylindrical and spherical Systems as particular cases - No problems. **[7 hours]**

## PART - B

### **Unit-V : Integral Calculus**

Differentiation under the integral sign-simple problems with constant limits. Reduction formulae for the integrals of  $\sin^n x$ ,  $\cos^n x$ ,  $\sin^m x \cos^n x$  and evaluation of these

integrals with standard limits - problems.

Tracing of curves in cartesian, parametric and polar forms - Illustrative examples. Applications - Area, Perimeter, Surface area and Volume. Computation of these in respect of the curves - (i) Astroid :  $x^{2/3} + y^{2/3} = a^{2/3}$  (ii) Cycloid :  $x = a(\theta - \sin \theta)$ ,  $y = a(1 - \cos \theta)$  (iii) Cardioide :  $r = a(1 + \cos \theta)$

[6 hours]

### **Unit-VI : Differential Equations**

Solution of first order and first degree equations : Recapitulation of the method of separation of variables with illustrative examples. Homogeneous, Exact, Linear equations and reducible to these forms, Applications : orthogonal trajectories.

[7 hours]

### **Unit-VII : Linear Algebra - 1**

Recapitulation of Matrix Theory. Elementary transformations, Reduction of the given matrix to echelon and normal forms, Rank of a matrix, consistency of a system of linear equations and solution. Solution of a system of linear homogeneous equations (trivial and non-trivial solutions). Solution of a system of non-homogeneous equations by Gauss elimination and Gauss-Jordan methods.

[6 hours]

### **Unit-VIII : Linear Algebra - 2**

Linear transformations. Eigen values and eigen vectors of a square matrix, similarity of matrices, Reduction to diagonal form, Quadratic forms, Reduction of quadratic form into canonical form, Nature of quadratic forms.

[7 hours]

**Note : In the case of Illustrative Examples, questions are not to be set.**

## CONTENTS

### PART - A

Unit-I	DIFFERENTIAL CALCULUS-1	[1-78]
<b>1.1</b>	<b>Successive Differentiation</b>	<b>1</b>
1.11	Introduction	1
1.12	Successive (Higher Order) derivatives	1
1.13	$n^{\text{th}}$ derivatives of some standard functions	2
1.14	Leibnitz theorem for the $n^{\text{th}}$ derivative of a product	9
<b>1.2</b>	<b>Rolle's theorem and Mean value theorems</b>	<b>36</b>
1.21	Continuity and Differentiability	36
1.22	Rolle's theorem and its geometrical interpretation	37
1.23	Lagrange's mean value theorem	37
1.24	Cauchy's mean value theorem	39
1.25	A general mean value theorem or Taylor's theorem for a function of one variable	41
<b>1.3</b>	<b>Expansion of functions (Taylor's and Maclaurin's expansions)</b>	<b>56</b>
Unit-II	DIFFERENTIAL CALCULUS-2	[79-162]
<b>2.1</b>	<b>Indeterminate Forms</b>	<b>79</b>
2.11	Introduction	79
2.12	L'Hospital's rule (Theorem)	79
<b>2.2</b>	<b>Polar curves</b>	<b>104</b>
2.21	Introduction	104
2.22	Polar coordinates	104
2.23	Angle between radius vector and tangent	105
2.24	Length of the perpendicular from the pole to the tangent	106
<b>2.3</b>	<b>Derivative of arc length</b>	<b>135</b>
2.31	Introduction	135
2.32	Formulae connected with the derivative of arc length	135
<b>2.4</b>	<b>Radius of curvature</b>	<b>135</b>
2.41	Introduction	135
2.42	Curvature and Radius of Curvature	136
2.43	Expression for the radius of curvature in the case of a cartesian curve	137
2.44	Expression for the radius of curvature in the case of a parametric curve	138
2.45	Expression for the radius of curvature in the case of a polar curve	151
2.46	Expression for the radius of curvature in the case of a pedal curve	152
Unit - III	DIFFERENTIAL CALCULUS - 3	[163-254]
<b>3.1</b>	<b>Partial Differentiation</b>	<b>163</b>
3.11	Introduction	163

3.12	Partial derivatives	163
3.13	Total differentiation	193
<b>3.2</b>	<b>Jacobians</b>	<b>217</b>
3.21	Introduction	217
3.22	Definition	217
<b>3.3</b>	<b>Taylor's theorem for a function of two variables</b>	<b>227</b>
3.31	Taylor's series of $f(x, y)$	227
<b>3.4</b>	<b>Maxima &amp; Minima for a function of two variables</b>	<b>230</b>
3.41	Necessary & sufficient conditions for maxima or minima	231
<b>3.5</b>	<b>Errors and Approximations</b>	<b>240</b>
3.51	Introduction	240
3.52	Absolute, Relative and Percentage errors	240
Unit - IV VECTOR CALCULUS		255-318
<b>4.1</b>	<b>Vector Differentiation</b>	<b>255</b>
4.11	Introduction	
4.12	Basic concepts - Vector function of a single variable and the derivative of a vector	255
4.13	Scalar and Vector point functions	256
4.14	Gradient, Divergence, Curl and Laplacian	257
4.15	Solenoidal and Irrotational vector fields	285
4.16	Vector Identities	293
<b>4.2</b>	<b>Orthogonal Curvilinear Coordinates (O.C.C)</b>	<b>306</b>
4.21	Definitions	306
4.22	Scale factors of the cylindrical and spherical systems	308
4.23	Orthogonality of the cylindrical system	309
4.24	Orthogonality of the spherical system	309
4.25	Expression for the arc length and volume element in O.C.C	310
4.26	Expression for $\text{grad } \psi$ ( $\nabla \psi$ ) in O.C.C	311
4.27	Expression for $\text{div } \vec{A}$ ( $\nabla \cdot \vec{A}$ ) in O.C.C	312
4.28	Expression for $\text{curl } \vec{A}$ ( $\nabla \times \vec{A}$ ) in O.C.C	314
4.29	Expression for Laplacian of $\psi$ ( $\nabla^2 \psi$ ) in O.C.C	316
<b>PART-B</b>		
UNIT-V INTEGRAL CALCULUS		[319-370]
<b>5.1</b>	<b>Introduction</b>	<b>319</b>
5.2	Differentiation under the integral sign	319
5.21	Leibnitz rule for differentiation under the integral sign	319
<b>5.3</b>	<b>Reduction Formulae (R.F)</b>	<b>332</b>
5.31	Reduction formula for integral of $\sin^n x$	333
5.32	Reduction formula for integral of $\cos^n x$	335

5.33	Reduction formula for integral of $\sin^m x \cos^n x$ . . . . .	337
5.4	Tracing of curves . . . . .	353
5.5	Applications of Integral Calculus . . . . .	359

Unit - VI DIFFERENTIAL EQUATIONS (D.E) . . . . . [371-478]

6.1	Introduction . . . . .	371
6.2	Preliminaries . . . . .	371
6.3	Solution of D.E of first order and first degree . . . . .	374
6.31	Recapitulation of the method of separation of variables . . . . .	374
6.32	Homogeneous D.E . . . . .	377
6.33	Equations reducible to the homogeneous form . . . . .	391
6.34	Exact D.E . . . . .	403
6.35	Equations reducible to the exact form . . . . .	411
6.36	Linear D.E . . . . .	425
6.37	Equations reducible to the linear form . . . . .	437
6.4	Orthogonal Trajectories . . . . .	448
6.41	Orthogonal trajectories of cartesian and polar family of curves . . . . .	448
6.5	Methods of solving the D.E at a glance . . . . .	471
6.6	Type of Recognition - A retrospect . . . . .	472

Unit - VII LINEAR ALGEBRA - 1 . . . . . [479-536]

7.1	Introduction . . . . .	479
7.2	Elementary transformations (operations) associated with a matrix . . . . .	485
7.4	Echelon form and normal form of a matrix . . . . .	486
7.5	Rank of a matrix . . . . .	492
7.6	Consistency of a system of linear equations . . . . .	506
7.61	Solution of linear homogeneous equations . . . . .	578
7.7	Solution of a system of non-homogeneous equations . . . . .	525
7.71	Gauss elimination method . . . . .	525
7.72	Gauss - Jordan method . . . . .	526

Unit - VIII LINEAR ALGEBRA - 2 . . . . . [537-588]

8.1	Introduction . . . . .	537
8.2	Linear Transformations . . . . .	537
8.3	Eigen values and eigen vectors of a square matrix . . . . .	543
8.4	Similarity of matrices and Diagonalisation of matrices . . . . .	555
8.5	Quadratic Forms . . . . .	570
8.51	Reduction of quadratic form into canonical form . . . . .	572
8.52	Nature of the quadratic form . . . . .	572

	BEATING THE MEMORY . . . . .	589
