

Fourth Semester B.E. Degree Examination, June/July 2024 Turbomachines

Time: 3 hrs.

1

Max. Marks: 100

Note: Answer any FIVE full questions, choosing ONE full question from each module. Module-1

- a. Distinguish between a turbomachine and a positive displacement machine. (06 Marks)
 - b. What is a turbomachine? With a neat sketch, explain the principle components of turbomachine. (06 Marks)
 - c. From the performance curve of a turbine, it is seen that a turbine of 1m diameter acting under a head of 1m develops a speed of 25rpm. Determine the diameter of the prototype, if it develops 10,000kW, working under a head of 200m with a specific speed of 150rpm.

(08 Marks)

(10 Marks)

OR

- 2 a. Derive the basic Euler Energy equation for a turbomachine.
 - b. A model of Francis turbine of 1:5 scale ratio is tested under a head of 1.5. If developed 3kW at 360rpm. Determine the speed and power developed under a head of 6m. (05 Marks)
 - c. An output of 10kW was recorded on a turbine, 0.5m diameter, revolving at a speed of 800rpm, under a head of 20m. Determine the diameter and output of another turbine which works under a head of 180m at a speed of 200rpm, when their efficiencies are same.

(05 Marks)

Module-2

- a. What is polytropic efficiency in the compression process? Formulate the corresponding equation. (08 Marks)
 - b. An air compressor has the following data. Inlet pressure = 1.02br, Exit pressure = 1.5bar, Inlet temperature = 300K, Exit temperature = 340K. Determine : i) the isotropic compression efficiency ii) Polytrophic efficiency.
 - c. An air compressor has 6 stages of equal pressure ratio of 1.4. The overall isentropic compression efficiency is 84%. Entry pressure is 1 br and $T_1 = 40^{\circ}$ C. Determine the state of air at the exit.

 $[\gamma = 1.4, R = -0.287 \text{kJ/Kg.K}, C_p = 1.005 \text{ kJ/Kg.K}].$

(06 Marks)

(08 Marks)

(06 Marks)

OR

- 4 a. With reference to a compression process, explain stage efficiency, Represent the same on separate T-S or h-s diagram. (06 Marks)
 - b. A jet of gas has the following data : Temperature = 593K, $\gamma = 1.3$, R = 469J/Kg.K, Mach No = 1.2. Determine for static and stagnation condition, i) Velocity of sound, Enthalpy. (06 Marks)
 - c. Define reheat factor and explain the same.

Module-3

- a. Explain the phenonmena of surging and choking in a compressor. (08 Marks)
 - b. What is a diffuser? Explain with a neat sketch.
 - c. Free air delivered by compressor is 20Kg/min. The inlet conditions are 1bar and 20°C, static. The velocity of air at the inlet is 60m/s. The isentropic efficiency of the compressor is 0.7. The total head pressure ratio is 3. Determine the total head temperature at the exit. (06 Marks)

3

5

- A two stage centrifugal compressor delivers 500m³ of free air per min. The suction conditions are 1bar and 15°C. The compression ratio and isentropic efficiency of each stage 6 a. are 1.25 and 80% respectively. Determine the isentropic efficiency for the entire compression process.
 - b. Air at a temperature of 290K, flows in a centrifugal compression running at 20,000 rpm, slip factor = 0.8, $\eta_{t,t}$ = 0.8, d^2 = 0.6m. Assume that the absolute velocity at the inlet and outlet are same. Determine the temperature rise of air passing through the compressor.

Module-4

Mention different types of losses in a radial flow turbine and define nozzle loss coefficient. (10 Marks) a.

7

The output of a 3 stage gas turbine is 30mW at the shaft coupling at an entry temperature of 1500K. The overall pressure ratio across the turbine is 11 and efficiency 88%. If the pressure b. ratio of each stage in same, determine : i) pressure ratio of each stage ii) Polytropic efficiency. Assume $\gamma = 1.4$, $C_p = 1.005 \text{kJ/Kg.k.}$ Assume an efficiency of 91% to take into account shaft losses due to disc and bearing friction.

OR

- With reference to flow passage, write a brief description of subsonic, transonic and 8 a. supersonic turbine.
 - Show that the overall isentropic turbine efficiency is greater than the stage efficiency for an b. expansion process.

Module-5

- Explain the working of Kaplan Turbine with neat sketch. 9 a.
 - An axial flow pump is required to discharge 1.25m³/s of water, while running at 500rpm. The total head is 3.9m. If the speed ratio, is 2.3, flow ratio = 0.51, hydraulic efficiency = b. 0.87 and the overall pump efficiency is 0.82, determine : i) Power delivered to the water and the power input ii) The impeller hub diameter and tip diameter. (10 Marks)

OR

- Draw the inlet and exit velocity triangles for a Pelton wheel turbine. Formulate an 10 a. expression for the maximum hydraulic efficiency.
 - Draw Pelton wheel has a water supply rate of 5m³/s at a head of 256m and runs at 500rpm. Assuming turbine efficiency of 0.85, a coefficient of velocity for nozzle as 0.985, nozzle b. speed ratio of 0.46, determine : i) Power output ii) Specific speed iii) Number of jets (10 Marks) iv) Diameter of the wheel v) Jet diameter.
