BCS401

**Fourth Semester B.E/B.Tech. Degree Examination, June/July 2025**

## Analysis & Design of Algorithms

Time: 3 hrs.

Max. Marks: 100

**Note:** 1. Answer any FIVE full questions, choosing ONE full question from each module.  
2. M : Marks , L: Bloom's level , C: Course outcomes.

| Module – 1        |    |                                                                                                                                                                                                                            |  | M  | L  | C   |
|-------------------|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|----|----|-----|
| 1                 | a. | Explain the algorithm design and analysis process in detail.                                                                                                                                                               |  | 10 | L2 | CO1 |
|                   | b. | Define Algorithm. Explain the asymptotic notations with example.                                                                                                                                                           |  | 10 | L2 | CO1 |
| <b>OR</b>         |    |                                                                                                                                                                                                                            |  |    |    |     |
| 2                 | a. | Design an algorithm to search an element in an array using sequential search. Discuss the best-case, worst-case and average-case efficiency of this algorithm.                                                             |  | 10 | L3 | CO1 |
|                   | b. | Give the general plan for analyzing time efficiency of recursive algorithms and also analyze the tower of Hanoi recursive algorithm.                                                                                       |  | 10 | L3 | CO1 |
| <b>Module – 2</b> |    |                                                                                                                                                                                                                            |  |    |    |     |
| 3                 | a. | Apply quick sort algorithm to sort the list : 5, 3, 1, 9, 8, 2, 4, 7. Draw the tree of recursive calls made while tracing.                                                                                                 |  | 10 | L3 | CO2 |
|                   | b. | Write Merge Sort Algorithm. Find the efficiency of the algorithm.                                                                                                                                                          |  | 10 | L2 | CO2 |
| <b>OR</b>         |    |                                                                                                                                                                                                                            |  |    |    |     |
| 4                 | a. | Obtain the topological sort for the graph Fig. Q4 (a) using<br>(i) Source Removal Method.<br>(ii) Depth first Search Method.                                                                                               |  | 10 | L3 | CO2 |
|                   |    |  <p>Fig. Q4 (a)</p>                                                                                                                     |  |    |    |     |
|                   | b. | Explain Strassen's Matrix Multiplication. Apply Strassen's matrix multiplication to multiply the following matrices:<br>$\begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} \times \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$ |  | 10 | L3 | CO2 |

| Module – 3 |    |                                                                                                                                                                                                                |    |    |     |
|------------|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|-----|
| 5          | a. | Define AVL tree with an example. Construct an AVL tree of the list of keys : 5, 6, 8, 3, 2, 4, 7 indicating each step of key insertion and rotation.                                                           | 10 | L3 | CO3 |
|            | b. | Define Heap. Apply heap sort to sort the list of numbers : 2, 9, 7, 6, 5, 8 in ascending order using array representation.                                                                                     | 10 | L3 | CO3 |
| OR         |    |                                                                                                                                                                                                                |    |    |     |
| 6          | a. | Define 2-3 Tree. Construct 2-3 tree for the list of keys : 9, 5, 8, 3, 2, 4, 7 by indicating each step of key insertion and node splits.                                                                       | 10 | L3 | CO3 |
|            | b. | Design Har'spool algorithm for string matching. Apply this algorithm to find the pattern BARBER in the text : JIM_SAW_ME_IN_A_BARBERSHOP                                                                       | 10 | L3 | CO3 |
| Module – 4 |    |                                                                                                                                                                                                                |    |    |     |
| 7          | a. | Apply Floyd's algorithm to find the all pair shortest path for the given adjacency matrix. Fig. Q7 (a).                                                                                                        | 10 | L3 | CO4 |
|            |    | $W = \begin{bmatrix} 0 & 1 & \infty & 1 & 5 \\ 9 & 0 & 3 & 2 & \infty \\ \infty & \infty & 0 & 4 & \infty \\ \infty & \infty & 2 & 0 & 3 \\ 3 & \infty & \infty & \infty & 0 \end{bmatrix}$ <p>Fig. Q7 (a)</p> |    |    |     |
|            | b. | Write Kruskal's algorithm to find minimum spanning tree. Illustrate with the following graph Fig. Q7 (b).                                                                                                      | 10 | L3 | CO4 |
|            |    |  <p>Fig. Q7 (b)</p>                                                                                                         |    |    |     |
| OR         |    |                                                                                                                                                                                                                |    |    |     |
| 8          | a. | Write Dijkstra's algorithm to find single source shortest path. Apply same for the given Fig. Q8 (a), a as the source vertex.                                                                                  | 10 | L3 | CO4 |
|            |    |  <p>Fig. Q8 (a)</p>                                                                                                        |    |    |     |

|            |      |                                                                                                                                                                                                                                                                                                                                    |        |      |      |   |   |        |           |      |     |     |       |      |      |      |      |    |    |     |
|------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|------|------|---|---|--------|-----------|------|-----|-----|-------|------|------|------|------|----|----|-----|
|            | b.   | Construct a Huffman tree and resulting code word for the following :<br><table><tr><td>Symbol</td><td>A</td><td>B</td><td>C</td><td>D</td><td>-</td></tr><tr><td>Frequency</td><td>0.35</td><td>0.1</td><td>0.2</td><td>0.2</td><td>0.15</td></tr></table><br>Encode the text DAD. Decode the text 10011011011101.                 | Symbol | A    | B    | C | D | -      | Frequency | 0.35 | 0.1 | 0.2 | 0.2   | 0.15 | 10   | L3   | CO4  |    |    |     |
| Symbol     | A    | B                                                                                                                                                                                                                                                                                                                                  | C      | D    | -    |   |   |        |           |      |     |     |       |      |      |      |      |    |    |     |
| Frequency  | 0.35 | 0.1                                                                                                                                                                                                                                                                                                                                | 0.2    | 0.2  | 0.15 |   |   |        |           |      |     |     |       |      |      |      |      |    |    |     |
| Module – 5 |      |                                                                                                                                                                                                                                                                                                                                    |        |      |      |   |   |        |           |      |     |     |       |      |      |      |      |    |    |     |
| 9          | a.   | Construct a state space tree to solve force queen's problem using backtracking.                                                                                                                                                                                                                                                    | 10     | L3   | CO5  |   |   |        |           |      |     |     |       |      |      |      |      |    |    |     |
|            | b.   | Solve the following instance of the knapsack problem by using branch and bound method.<br><table><tr><td>Item</td><td>1</td><td>2</td><td>3</td><td>4</td></tr><tr><td>Weight</td><td>4</td><td>7</td><td>5</td><td>3</td></tr><tr><td>Value</td><td>\$40</td><td>\$42</td><td>\$25</td><td>\$12</td></tr></table> Capacity W = 10 | Item   | 1    | 2    | 3 | 4 | Weight | 4         | 7    | 5   | 3   | Value | \$40 | \$42 | \$25 | \$12 | 10 | L3 | CO5 |
